Assignment 04

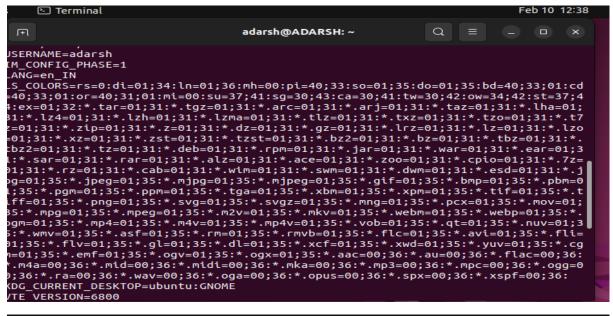

Information Security

ADARSH 2022pis0026 11 February 2023

1. Manipulating Environment Variables

Showing Environment Variables

```
Terminal
  ſŦΙ
                                            adarsh@ADARSH: ~
                                                                               Q
adarsh@ADARSH:~$ env
SHELL=/bin/bash
SESSION_MANAGER=local/ADARSH:@/tmp/.ICE-unix/2044,unix/ADARSH:/tmp/.ICE-unix/204
QT_ACCESSIBILITY=1
COLORTERM=truecolor
XDG_CONFIG_DIRS=/etc/xdg/xdg-ubuntu:/etc/xdg
SSH_AGENT_LAUNCHER=gnome-keyring
XDG_MENU_PREFIX=gnome-
GNOME_DESKTOP_SESSION_ID=this-is-deprecated
LANGUAGE=en_IN:en
GNOME_SHELL_SESSION_MODE=ubuntu
SSH_AUTH_SOCK=/run/user/1000/keyring/ssh
XMODIFIERS=@im=ibus
DESKTOP_SESSION=ubuntu
GTK_MODULES=gail:atk-bridge
PWD=/home/adarsh
LOGNAME=adarsh
XDG_SESSION_DESKTOP=ubuntu
XDG_SESSION_TYPE=wayland
SYSTEMD_EXEC_PID=2065
XAUTHORITY=/run/user/1000/.mutter-Xwaylandauth.I3J4Z1
HOME=/home/adarsh
USERNAME=adarsh
```

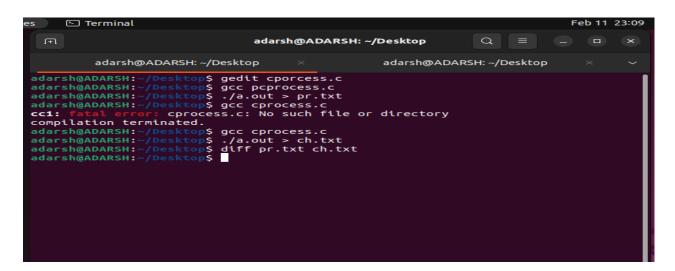

2. Passing Environment Variables (Parent Process to Child Process)

1. Running *printenv()* for the child *process* and *parent process* gives the same Environment variables as output. That means Environment variables are passed from *parent* to *child* when *fork()* is used.

3. Environment Variables and execve()

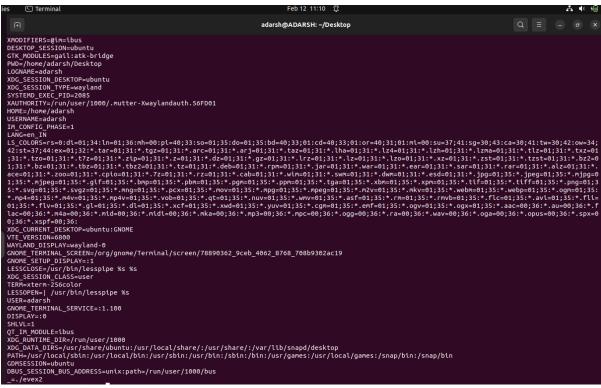

- 1. execve(const char *pathname, char *const argv[], char *const envp[]) replaces the parent process by a new child process with newly initialized stack, heap etc. And Environment Variables are transferred from parent to child through envp.
- 2. *pathname* is set to "/*usr/bin/env*". This will execute the program *env* which prints Environment Variables.
- 3. In the first program no Environment Variables were passed(*env* = *NULL*). So, the program didn't print any Environment Variables.
- 4. In the second program Environment Variables were passed using environ variables. So, all Environment variables were printed.

  10 //execve("/usr/bin/env", argv, NULL);
  11 return 0 ;
  12 }
```

```
| Reb | Reb
```

4.Environment Variables and system()

1. system() by default passes Environment Variables to the child process. 2. Verified this by running the program (<u>sysver.c</u>)

5. Environment Variable and Set-UID Programs

```
ties
       Text Editor
                                                                               Feb 12 11:05
                                                                                 evex.c
    Open ~
                                                                                ~/Desktop
   1 #include <stdio.h>
   2 #include <stdlib.h>
   3 extern char **environ;
   4 int main()
   6 char *argv[2];
   7 argv[0] = "/usr/bin/env";
   8 argv[1] = NULL;
   9 execve("/usr/bin/env", argv, NULL);
 10 return 0 ;
 11 }
```

1. Compile the program (<u>foo.c</u>), change its (<u>foo</u>) ownership to root, and make it a Set-UID program and set Environment Variables in user level.

```
adarsh@ADARSH:~/Desktop$ sudo chown root ./foo
adarsh@ADARSH:~/Desktop$ sudo chmod 4755 ./foo
adarsh@ADARSH:~/Desktop$
```

2. Running the program we can see the Environment Variables (rootenv.txt) are not changed in root level, new variables are also not added.

```
adarsh@ADARSH: ~/Desktop
add=rhapADARSH:-/Deskto; Sudo chnod 4755 ./foo
dd=rhapADARSH:-/Deskto; S./foo

```

6. The PATH Environment Variable and Set-UID Programs

/usr/tocat/sutn:/usr/tocat/bin:/usr/sbin:/usr/bi SSION=ubuntu SESSION_BUS_ADDRESS=unix:path=/run/user/1000/bus

The Set-UID program below is supposed to execute the /bin/ls command; however, the programmer only uses the relative path for the ls command, rather than the absolute path:

```
